Enhanced Thermoelectric Performance of Compacted Bi<sub>0.5</sub>Sb<sub>1.5</sub>Te<sub>3</sub>  
Nanoplatelets with Low Thermal Conductivity

Abstract

We report fabrication of compacted Bi<sub>0.5</sub>Sb<sub>1.5</sub>Te<sub>3</sub> nanoplatelets using hydrothermal methods followed by cold pressing and sintering in an evacuated ampoule at various temperature of 300–380 °C. The compacted Bi<sub>0.5</sub>Sb<sub>1.5</sub>Te<sub>3</sub> sintered at 340 °C has the highest power factor of 11.6  $\mu\text{W}/\text{cm}\cdot\text{K}^2$  and its thermal conductivity is 0.37 W/m·K at 295 K, which is very low as compared to the typical value of 1 W/m·K. The resulting dimensionless figure of merit ZT is 0.93 at 295 K.
